

## Linear Sheet Polariser

**Material / Specification:** HN32 - Visible grade/ 32% transmission

**Range / Description:** POL-HN32

Single: Transmittance for a single film.  
 Parallel: Transmittance for a double film, axis parallel  
 Crossed: Transmittance for a double film, axis crossed

**Polariser:** HN32

**Type:** Neutral linear polariser.

**Features:** Represents the best balance between transmission and extinction for general use. Extinction transmission is about 0.005%

**Typical Applications:** Variable density filter systems, photoelastic stress analysis and other applications where light modulation is necessary.
