

## Linear Sheet Polariser

**Material / Specification:** HN38S - Visible grade/ 38% transmission

**Range / Description:** POL-HN38S

Singe: Transmittance for a single film.  
 Parallel: Transmittance for a double film, axis parallel  
 Crossed: Transmittance for a double film, axis crossed

**Polariser:** HN38S

**Type:** Neutral linear polariser.

**Features:** Very high efficiency linear polariser for the visible spectrum. Specially formulated to eliminate blue streak in the crossed (extinction) position.

**Typical Applications:** Recommended for applications where a very high extinction density in the crossed position is as important as a transmittance value is in the open position.
